

PRODUCT INFORMATION

DynaZone®N26 is a liquid foliar nitrogen fertilizer that contains Triazone, a patented, controlled release nitrogen that is non-phytotoxic in low volume sprays and may be applied on most crops with no water along with most pesticides and most other chemicals.

CROP RECOMMENDATIONS

DynaZone N26 is recommended on the following crops to prevent nitrogen deficiencies and maximize yields: Alfalfa, almonds, avocados, apples, barley, beans, broccoli, cabbage, cauliflower, carrots, celery, citrus, corn, cotton, cucumbers, eggplant, grapes, lettuce, milo, melons, rice, pears, pecans, peppers, potatoes, peanuts, strawberries, tomatoes, turf, turnips and wheat.

Citrus: 1–5 gallons per acre applied with low volume spray. Repeat as needed.

Ornamentals: 2–4 quarts in enough water to ensure best coverage.

Vegetables: 1–2 gallons per acre in enough water for thorough coverage. Low volume sprays should give the best results.

Small Fruit: Blueberries, grapes, raspberries—Start initial application at early leaf stage at 2–4 quarts in enough water to cover. Apply weekly as needed.

Turf: Apply 4–8 ounces per 1000 sq. ft. Repeat as needed. In Florida, use in accordance with the recommendations in "BMP's for the Enhancement of Environmental Quality on Florida Golf Courses" found at:
www.dep.state.fl.us/water/nonpoint/pubs.htm

DIRECTIONS FOR USE

DynaZone N26 may be applied as an undiluted spray or mixed with water where spray equipment requires more volume. Avoid high spray volumes (generally over 25 gallons per acre) where possible because of excessive run-off. **DynaZone N26** has a pH of 8.7 and may keep spray water pH at or above 7. When adding **pHylo®** or other acidifying agents to your tank, apply within 6 hours as the stability of the DynaZone® could be affected.
